

Did you know that CICS 3.2 support ends September, 2010

Why not upgrade to CICS 4.1? It's been available since June, 2009

Some of the new features and functions of 4.1 include:

- Support business event detection and emission from CICS without the need to change existing applications, enabling the creation of production business views using dashboards in a matter of hours.
- Create new business insight by publishing key application data, enabling rich client developers to use Web 2.0 technologies, such as Atom feeds and RESTful interfaces, to create mashups and other situational applications.
- Modify processes rapidly and with confidence by assembling and deploying new business applications quickly using service components.

CICS TS V4.1 meets the need for greater control. It can be configured to feed business event processing engines and business dashboards, without the need to change existing applications. This allows line-of-business managers to ensure that business processes are monitored, to assess compliance requirements, and react to compliance failures, security breaches, and incidents of fraud.

Although CICS TS V4.1 places great emphasis on the needs of customer lines-of-business, it also offers relief to IT support staff. As first- and second-generation IT staff leave the industry, their successors need tools and other help to cope with the workload. CICS TS V4.1 addresses these issues. For example:

- With the CICS Explorer it provides a powerful tooling environment that brings many facets of CICS system programming to a single, modern dashboard. The environment can be shared with complementary CICS tools, including those commonly available from IBM partners.
- Through extensions to its TCP/IP support, CICS TS V4.1 continues to remove dependence on SNA networking skills.
- Through new change management logging and support for identity propagation, it provides greater accountability and auditability in an increasingly complex environment.

Trident Services, Inc., 1260 41st Avenue, Suite K, Capitola, CA 95010

Solutions for z/OS & Enterprise Servers

CICS TS V4.1 also offers performance improvements when compared against CICS TS V3.2. These improvements have been observed in the areas of traditional workloads, dynamic workload management, TCP/IP connectivity and XML processing.
